Cochlear implants and the piano — Today, April 4

	Apr 4	7:40 PM
	-	has entered the room
davidh		I forgot how to chat but it looks easy enough. I'll stay
		7:50 PM
		has entered the room
	ford	I'm actually a guitarist possibly getting a CI in one ear within next 6 monthsjust thought I would lurk
		has entered the room
	davidh	a big issue is percussiveness
		7:55 PM
	ford	so everything sounds uniform and flat? no dynamics?
		I have sesorliner loss so my low frequencies are mild I would be going for a hybrid
		If loss
		LF loss
		everything above about 2k is gone
1	Kathleen M.	Hi Ford, I have a hybrid, the Med-El EAS. Just got activated almost 4 months ago
	davidh	not after a while but by percussiveness I mean that the liveliness of the CI has made every piano sound a physical experience it doesn't seem to matter what the volume is, but it is a very slow path for the betterI am sure we have different issues, but I have only one CI
		what is a hybrid?
	Pat D.	has entered the room
		Hi everyone.
		Is anyone there?
	ford	hmm my left ear is worse but right ear also profoundbut the better ear i guess you could turn it off while playing during the learning period
		hybrid means the sensor is only put in about half wayhopefully preserving the low frequencies
		8:00 PM
	ford	used to be a craps shootbut I hear that the tech is getting much better
	Pat D.	Hi Ford – I'm confused. Do you have a CI or a hybrid?
	davidh	I am still experimenting with when to use one, when HA plus CI and when to use both. Fatigue sets in but no doubt two together is best for at least four hours a day if not more.
	ford	some chance of losing everything in the ear but they are getting better at it from what lve read
	Wendy C.	has entered the room
	Wendy C.	Hi!!!
		Wow we have a large crowd today!
	Angela	has entered the room
	Pat D.	Hi Wendy
	ford	I don't have either I use regular HA's presentlybut just got evaluated and recommended a "hybrid" CI in my left ear
	Wendy C.	Hi Angela! Glad you were able to make it!
	ford	
	-	Ok – let me sort of introduce everyone
	ford	I guess it is the same fatique we all feel just trying to follow conversations :-)
		ok

Angela	Hi Wendy. Hello to everyone.			
Wendy C.	I'm Wendy – president of the Association – I live in Gaithersburg MD, and play viola, piano and also ring handbells			
	My piano skills are a bit rudimentary			
davidh	the use of one of each seems ultimately a good thing as far as natural, beauty and clarity but it takes the musicians efforts more than the docs			
Wendy C.	David Holzman is a concert pianist with one cochlear implant and one hearing aid?			
	he is from Long Island, New York			
davidh	thanks and best to all			
Wendy C.	Kathleen Marin hails from suburbs of Minneapolis. She is newly implanted with a EAS system from MedEl			
	My bilaterial CIs are from Advanced Bionics			
	David's is from Cochlear			
	Kathleen's EAS is from Med-El			
	8:05 PM			
Wendy C.	EAS is electro acoustic system, meaning lower frequencies is hearing aid (acoustic) and higher frequencies is electric (CI)			
ford	ok what I have been calling a hybrid			
Kathleen M.	Hi. I have CI in 1 ear, HA in the other, going deaf in that ear also.			
Wendy C.	Pat Dobbs hails from Madison, New Jersey not far from New York City			
	And Angela is Angela Hill from Norfolk, Virginia			
	Angela is a pianist and has bilateral Med-El Cis			
	Ford, please tell us more about yourself			
	where do you live and have you decided on which CIs to get?			
	EAS is the "official" name for hybrid, I think			
ford	I'm a bassist/guitarist/composer living in central calif			
Wendy C.	Near Sacramento?			
	Cool!			
ford	used to gig alot but preently am down to solo guitar			
	near yosemite			
	can't really hear in combos any more			
Wendy C.	Ok, I know where that is (vaguely! Visit Yosemite.			
ford	jazz player mostly			
davidh	WAS YOUR hearing loss gradual or sudden?			
Wendy C.	Yeah, hearing loss tends to adversely affect your ability to hear in ensembles			
Kathleen M.	I just attended a concert today with guitar and recorder. I could hear the guitar pretty well			
Wendy C.	Good for Kathleen!			
ford	gradual I was professional working for 20+ years and audio engineer I think the engineering with headphones did me in			
Wendy C.				
ford				
Wendy C.	Ford, sounds like you have "music-induced" hearing loss.			
ford				
Wendy C.	There's a conference on music induced hearing loss happening in June			
	8:10 PM			
davidh	wendy- what do you mean that timbre is close to HA			

ford	obviously pretty scared about losing any ability to hear music but at this point family life needs to take precendent			
	the idea of a CI is pretty new for me			
Wendy C.	That's a smart assessment, Ford!			
	So my hearing loss was flat and same across all frequency ranges			
ford	ok mine a waterfall with LF not terrible and HF gone			
Wendy C.	I wore Phonak hearing aids for many years before losing it all when I was 35 (back in 2006).			
	not a waterfall – that is called ski-slope high frequency hearing loss, I think.			
ford	this conference in june is east coast correct?			
	yes ski slope!			
Wendy C.	It is in Chicago			
	http://www.aes.org/conferences/2018/hearing/			
ford	i'll look for detailsoh thanks			
Wendy C.	Audio Engineering Society has a special interest group on music induced hearing loss and some big names in the audio engineering and audiology professions will be there			
Kathleen M.	Ford, as a wearer of the EAS system, here's my story. I can hear up to about the 2nd F above middle C with the acoustic part of the CI. It comes in quite nicely. I am gradually learning to hear music with the CI part. Timbre not good yet, some notes on pitch, others not. I also lost about 40 dB of hearing in the lower frequencies during implantation, but can still hear music with the HA part.			
davidh	my sense is that CI is hearing much more treble than three months ago and that the sounds are finally even brilliant, but I may be confusing interaction with HA. This is 2 1/2 years together			
ford	thats helpful			
Wendy C.	So Ford, what I mean when I say timbre is almost the same as it was before, I mean that when I hear guitar, piano, viola, violin, etc. they sound similar to how they sound before I lost my hearing completely.			
	8:15 PM			
ford	hmm I understand that it is new way of learning to hear and I guess it would take many years to really adapt			
Wendy C.	But different people have difference experiences with CI			
Pat D.	wendy – was that always the case or did you have to work at it?			
Wendy C.	so many variables to hearing with a CI!			
ford	is there a program you can use to develop better hearing with CIor is it like physical therapy that requires lots of followup visits?			
	I'm 4 hours away from house clinic in LA I have been self programming my HA's for past 8 years			
Wendy C.	Pat - I had two difference experiences with both ears. My right ear (profoundly deaf), never had any amplification when I was growing up. So when I got my right ear implanted, timbre came back slowly and pitch took much longer.			
davidh	it is a three-way street between brain, ear and fingerthe frustrations at the slowness are great, but they can be overcome with steady work			
ford	really have had a hard time finding an audiologist that even begins to undertand the musicians midset			
Wendy C.	I didn't touch my violin for six months. I spent a lot of time just playing scales on the piano and waiting for pitch to come			
Kathleen M.	David, I'm finding that my treble notes are coming in sooner than the base notes with the CI. Was that your experience?			
Pat D.	Kathleen – that was not my experience as base came in before treble.			
davidh	not at all! it was the opposite and I assumed it was because the electrodes were all low frequencies. So the change lately maybe my brain more than my machine			
Wendy C.	But the activation on my left ear went much better. I was hearing higher pitches on the viola very soon after activation. Timbre came back faster and pitch was faster.			
Pat D.	I am bi-laterial with Cochlear processors			
Kathleen M.	thanks. I can hear bass with the HA component, but I'm getting noise and buzzing from the CI part. annoying			
Wendy C.	So Pat, in my experience, rehabilitation is dependent on auditory memory, programming and similar how your ear			

	8:20 PM				
davidh	the buzzing was more than a yearit is still there where I hear something new, but the pitches seem to be overcoming it, particularly when my brain tells my ear what to hear				
Wendy C.	C. Kathleen, did you ask your CI audiologist to widen the IDR and reduce compression on the CI program?				
Pat D.	Wendy - agreed. My audiologist is not interested in spending time on programming my CI's for music.				
Wendy C.	Pat – contact Brad Ingrao – maybe he can help				
ford	music and speech really are different animals				
Wendy C.	he's out in California, but maybe he can help				
Pat D.	Wendy - thanks				
ford	I've kind of had to find a middle ground with my HA's and as my hearing got worsegive up on the music aspect in favor of speech				
Wendy C.	I'm not guarantee he will be able to help you, but he knows music and he knows CIs				
Kathleen M.	I see my audie next week. I will ask about IDR and reduce compression. Sadly, I had to change audie due to insurance, and I am her first patient with EAS				
ford	where is he				
Wendy C.	Ford, I'm impressed that you program your HAs				
ford	?				
davidh	when I see audiologist in a month I will see if she can create a special program PURELY for my practicing my piano. Nothing is more tiring for me than that and I feel as you do that she probably cant do it.				
ford	not too hard coming from an audio engineering background and as a programmer for my livelyhood				
	but it all takes so much time to get a handle on				
	very much a moving target all the time				
Wendy C.	Ford – <u>http://e-audiology.net/</u>				
	that is the link for Dr. Ingrao				
ford	thanks				
Wendy C.	he plays saxophone				
Pat D.	David – I would be interested in if your audiolgoist can do that? Where do you go for progamming (we're kind of neighbors)				
Wendy C.	he helped to write our book so I think he would be willing to talk about his experiences				
Pat D.	Thanks Wendy				
Wendy C.	he lives in Long Beach, California				
	He might be attending the HLAA (Hearing Loss Association of America) convention – I think he is on the HLAA board				
	8:25 PM				
Wendy C.	Besides Kathleen and me, who else is attending the HLAA convention?				
davidh	NYU Hosp 660 Ist Ave. I am not completely satisfied and there was someone there a year ago who was researching music and CI but he seems to have left due to money problems. I know that I am teaching them much as with medications and my neurologiststhe brain needs for a musician are different.				
Wendy C.	Angela, are you still there?				
Pat D.	unfortunately I can't goto HLAA this year.				
Wendy C.	You've been pretty quiet!				
	Sorry Pat! I'll miss seeing you				
Pat D.	Thanks David.				
Angela	Yes I am Wendy. Just that when I want to type something the lower bar blocks my typing once I get to the second line.				
Wendy C.	Which browser are you using?				
	I'm on Google Chrome				
ford	try not using the browser full screen				

disk chat software is to built for laptops and desktops disk lept the fering that the variations in our needs are at least as much as the similarities, which is not surprising Pat D. greed Good yes not supprising bevild, you are a professional musician. 	Angela		

	Wendy, my pitch and timbre is getting better with time since being bilateral. I am told that my singing on pitch is not as far off as when I was bi-modal. Still needs work, but I am much farther along in my music journey. Still able to play and appreciate the piano. In fact, this past Sunday I played for a small church service.			
Wendy C.	it's really 8 years in the left ear and about 11 years with my right Cl			
	Thanks Angela! I know I can sing in tune during Catholic Mass but I still can't sing chromatic intervals			
	Fortunately church hymns are not as difficult as oratorios. (smile)			
	Angela, can you provide the link again to your CI journey and give our chatters the password?			
Pat D.	David - I'm wit you - afraid to hear complex music too.			
davidh	what I mean is that it is always easier to do what you know. the fear and the chaos can be to a valuable degree overcome. That goes for chamber music if you have good friends playing with you.			
Angela	It will get better Wendy. Continue to look for those a ha moment with music appreciation.			
	8:40 PM			
Wendy C.	I think I prefer listening to chamber music over symphonic music. I can hear a symphonic work and it doesn't sound bad, but I can't pick out more than the melody and the bass accompaniment			
	David, I'm impressed if you can hear the harmony.			
davidh	do any of you need a break after an hour's work? I do and I am getting used to it.			
Wendy C.	An hour's work at the piano?			
Kathleen M.	I'm not quite up to an hour yet. It's hard work!			
Angela	Sure. It is <u>www.http://angelasciblog.com/</u> Password is 2012 Again, it has not been updated in years. This only shares my journey of the first 18 months of being implanted in my right ear. I was implanted in that ear July 2012, activated August and back on the piano in October of that same year.			
Wendy C.	Actually I need a break after practicing no matter which instrument I'm practicing :-)			
davidh	yesand now I learn to stop for 15 minutes, take devices out and do something else before getting back			
Wendy C.	Thank you Angela!			
	Ok I have a question for everyone.			
	Our Association is thinking of having an in-person meetup October 5-7.			
	Was wondering if anyone in this group might be interested			
	I prefer not to sign a rental agreement unless I can find 10 folks to attend. :-)			
	So let me know if you have questions			
Pat D.	I'm pretty sure that I will not be avaiable on those dates.			
Angela	http://angelasciblog.com/ This is the corrected website. Password again is Hear2012 If you have trouble accessing it please let me know.			
davidh	I would be interested but could not guarantee			
Wendy C.	Thank, Pat!			
	Thanks Pat – yeah, part of the problem is there are folks who don't know what their schedule in October looks like			
Kathleen M.	I would like to, but probably won't be able to travel that far.			
Wendy C.	I'll put the registration information up next week			
Angela	As long as that weekend does not fall on a weekend my husband works then not a problem at all. He currently works every other weekend.			
Pat D.	The Adult School is scheduling me for workshops on hearing loss and it will be sometime in October.			
Wendy C.	What is the Adult School, Pat?			
	8:45 PM			
Pat D.	The local adult education platform			
Wendy C.	Just tell them you are not available October 5. (Just kidding)			
	Oh, the local adult education community. Is that affilated with the local community collegle?			
	*college?			

	Ford, I have a question – do you still do audio engineering?				
Pat D.	Yes – it's affiliated with the local 2-year colleges				
Wendy C.	Question for Ford – When you set up microphones for musical ensembles, how do audio engineers determine how many microphones are needed?				
Pat D.	great question Wendy				
Kathleen M.	Question for everyone. Do you change the settings on your CI when you practice? Volume, sensitivity, etc?				
Wendy C.	Kathleen, I do				
ford	It really depends on the spaceI have historically gone with a mic on every intrument or jsut a space stero mic on the ensemble				
Wendy C.	What is a stereo mic?				
	8:50 PM				
ford	but truthfully it has been 10+ years since I did sound reinformcementand now with in-ear-monitors and the likeit is a different world				
Wendy C.	Kathleen: When I got my CI, my audiologist at Hopkins set up a program for speech and a program for music.				
	after a while I decided to use the music program for every day conversation				
ford	a single mic with a left and right sidechannnel so you simulate a person standing in front of the group				
davidh	I put both setting at 1 and I do not know whether sensitivity helps or hurts. the strange thing is that I think that the regular settings or 4 or 5 might be the ultimate goal andit just takes getting used to. It is very confusing and many factors such as fatigue, overhearing, pitch come into play. I tend to keep them low when practicingwhen listening they are much higher				
Wendy C.	Thanks Ford!				
ford	or sometimes two mics crossed over each other				
	but really best for acoustic situations				
Wendy C.	So Kathleen – I have program 1 for everyone conversation, and program 2 for music practice				
ford	with amplified instruments and drums it can get more comlicated				
	complicated				
Kathleen M.	I was told Med-El doesnt do special music programs. Ive also tried lowering the volume and sensitivity to try to minimize the buzzing sound				
ford	hey all I have to run but this is great I look forward to more chats				
Pat D.	Wendy – you use your music setting for every day conversations – wow!				
Wendy C.	program 2 is the same as program 1 except for the fact that it is set to 50% mic and 50% auxilary (for using assistive listening devices)				
Pat D.	Bye Ford				
Wendy C.	because I use and ALD system to practice				
Pat D.	looking forward to talking again				
Kathleen M.	·				
Wendy C.					
davidh	sensitivity seems to widen pitches which is bad, but sounds are arriving faster.				
Wendy C.					
	Ford - to exit, click on the "Sign out" link on the upper right corner				
ford Wendy C	has left the room Glad you enjoyed our chat!				
wenuy C.	We'll have to stop at 9 pm				
Pat D.					
Wendy C.					
Wenuy C.					
	8:55 PM				

Wendy C. For viola lesson and handbells practice, I use an ALD.

	when I am not practicing I take the ALD off			
Angele	At this time, I do not when practicing. However, in the beginning of my CI journey I did.			
Wendy C.	*conversation			
	I have more stringent requirements for listening when it comes to practicing/rehearsing music, thus the need for the ALD			
Pat D.	Pat D. Wendy what are the changes in the music when using an ALD?			
Wendy C.				
	of one of the 4 string, it rings. When it rings I know I am playing in tune.			
	and I don't want to have to lipread my teacher during lesson, so he wears one of the transmitters too			
Pat D.				
Wendy C.				
	And I clip the three other transmitters on the notebook for the ringers playing the high treble bells			
Wendy C.	9:00 PM Sometimes my director has me ring the lower bells or the bells just above middle C. But most of the time the melody			
wendy C.	is in the high treble so I know if I can hear the melody, I won't get lost during rehearsals			
	When I am conducting, I clip the transmitter to the high treble bells too so if I lose my place in the music I can find it. (Smile)			
	I do find myself trying to be better at score study and trying to memorize passages so I can have better eye with my ringers			
Pat D.	how many mic's can your system handle?			
Wendy C.	My system has 3 transmitters and one receiver			
	this is from Etymotic Research			
	I wrote a review about it in our recent newsletter			
Pat D.	thanks will check it out			
Wendy C.	it's 9:02!			
	Thanks everyone!			
Pat D.	Oh - that's why I'm turning into a pumpkin!			
Kathleen M.	Thanks			
davidh	Good night to all and my best.			
Wendy C.	Which night is better for you all – Wednesday evening or Sunday evening?			
Pat D.	Thanks Wendy - Night all and nice chatting with you all.			
	Wednesday evenings			
Wendy C.	I'm trying to decide when to schedule May's chat			
davidh	either			
Kathleen M.	Either for me			
Wendy C.	Ok!			
Angela	Good night everyone. Wednesday evening.			
Wendy C.	Maybe I'll alternatve between Wednesday and Sunday			
davidh	has left the room			
Pat D.	Night all			
Wendy C.	take care everyone!			
	good night!			
Kathleen M.	has left the room			

	Angela	has left the room
		9:20 PM
	Pat D.	has left the room
We	endy C.	has left the room
